

SharePoint 2010 Upgrade Skills for Administrators

This 3-day course provides a comprehensive look at the new administrator features and capabilities in SharePoint 2010. It is designed for administrators who have experience configuring and managing sites using earlier versions of SharePoint. This class includes 50% hands-on labs that teach you how to deploy, configure, monitor, and manage SharePoint sites. It also covers the new Service Application framework (the replacement for SSPs), improved search options, and monitoring and diagnostics capabilities.

Flexible Learning Options

Attend in Person

- Industry expert trainers
- Relevant training skills
- High-tech teaching tools

Connect Remotely

- Classroom-in-the-cloud
- Connect from anywhere
- 24-hour access to labs

Bring Us Onsite

- Customized curriculum
- Connect staff from multiple locations
- Access virtual hardware and labs over the Internet

"I had concerns about remote training before I took this class. However I can see that Quicklearn makes it work well." - Kent M.

"The learning enviroment was top-notch. I especially liked the large monitors, 64bit OS and fast processors." - Matt E.

Course Highlights

At course completion, students will be able to:

- Describe new SharePoint 2010 capabilities and features
- Navigate with the new Ribbon UI (user interface)
- Describe the new Service Application framework
- Create and configure Service Applications
- Automate tasks with Microsoft PowerShell
- Configure activity monitoring and diagnostic logging
- Work with the SharePoint Health Analyzer
- Configure event throttling and web analytics
- Describe the SharePoint 2010 search architecture
- Install and configure a search service application including federated search and FAST search
- Describe backup and high availability enhancements
- Perform a backup and granular restore of site data
- Plan and implement an upgrade from SharePoint 2007

Audience

This course is intended for:

.NET developers with 3-6 months of hands-on experience with managing a SharePoint Server 2007 environment.

Note: We recommended that SharePoint administrators also attend *Upgrading to SharePoint 2010 for Power Users* which covers new SharePoint 2010 features that are not covered in this course.
