

Managing Agile Projects Using TFS 2017

Duration	3 days	Version	2017.1
Skill level	Intermediate		
Audience	Project managers, Scrum Masters, Team Leads, Lead Developers		
Products and technologies	The following products and technologies will be covered in this course: <ul style="list-style-type: none">• Team Foundation Server 2017• Microsoft Excel• Agile, Scrum, and Kanban		

Course Description

This 3-day course provides project managers, Scrum masters and team leads the essential skills required to effectively manage a software development project using Microsoft Visual Studio Team Foundation Server 2017.

This course focuses on Agile methodologies and includes discussions and content focused on both Scrum and Kanban practices. We look at how TFS supports the team during the sprint planning and daily Scrum events, as well as how to create and manage the product backlog and sprint backlog artifacts.

In this course, attendees will plan a new software development project and go through the steps to initiate the project using Visual Studio 2017. This includes recording requirements, creating a product backlog and estimating effort for backlog items. We'll cover planning and running a sprint as well as using the task board and burndown chart to track progress.

The course also covers using storyboards to prototype experiences, requesting stakeholder feedback, team collaboration, and reporting.

This course includes hands-on labs to reinforce practical skills and ensure you're ready to use the tools on your return to your workplace. All Scrum content adheres to the latest version of the official Scrum Guide and provides helpful preparation for anyone considering gaining Scrum certification.

Course Objectives

At the completion of this course, attendees will be able to:

- Describe the full feature set of Microsoft's Application Lifecycle Management suite
- Understand how Work Item Tracking (WIT) can be used across the entire team
- Search work items and create custom work item queries
- Create work item charts and add them to the dashboard
- Use a variety of client tools to interact with team members
- Initiate a new team project
- Enter requirements into Team Foundation Server including storyboards to illustrate requirements and experiences
- Use the Kanban board to work with the product backlog
- Record estimates in your requirement types
- Plan and run a sprint including tracking progress using task boards and burndown charts
- Understand several of the quality indicators available
- Use dashboards to view team performance and quality indicators
- Record team capacity and monitor a team's velocity
- Capture quality feedback from stakeholders
- Configure notifications for team members
- Understand the out-of-the-box reports and what they can tell us about our project
- Create ad hoc reports using Microsoft Excel

Audience

This course is designed for project managers, Scrum masters, business analysts, and team leaders looking to effectively manage their development projects using Team Foundation Server 2017.

Prerequisites

Attendees should have some familiarity with the basic use of TFS.

Modules

Module 1: Introducing the Microsoft Visual Studio 2017 Family

- What's new in Visual Studio 2017
- Overview of the Visual Studio 2017 family
- Overview of product features
- Project workflow across the Visual Studio 2017 suite of products

Module 2: Initiating a New Project

- Organizing projects in TFS
- Understanding process templates
- Creating a new team project
- Setting team project properties

Module 3: Getting Our Team Started

- Configuring teams in our team project
- Setting team properties
- Configuring iterations for TFS teams

Module 4: Creating our Product Backlog

- Understanding requirement types
- A review of user stories
- Creating backlog items in TFS
- Traceability between work items
- Creating requirement hierarchies using features
- The importance of acceptance criteria

Module 5: Enhancing Requirements

- Creating and recording personas
- Overview of storyboarding capabilities
- Creating a storyboard to illustrate a requirement
- Linking a storyboard to a work item

Module 6: Agile Estimation

- Introduction to Agile estimation
- Using story points
- Planning Poker and other popular estimation techniques
- Adding your estimates to TFS work items

Module 7: Working in Sprints (Planning)

- Our Sprint planning meeting
- Specifying your sprint schedule and your team capacity
- Selecting items for the sprint backlog using forecasting
- Decomposing requirements into tasks
- Using burndown charts to track progress
- Monitoring work using the task board
- Working with unparented work items

Module 8: Working in Sprints (Execution)

- Overview of Agile testing
- A lap around web-based test management
- Creating a test plan
- Creating manual test cases from requirements
- Overview of Agile development
- Using My Work to select tasks from the sprint backlog
- Understanding the value of linking changesets to work items

Module 9: Working in Sprints (Delivery)

- Understanding potentially shippable increments
- Ensuring you're ready for the review meeting
- Continuous integration
- Release Management

Module 10: Retrospectives

- The importance of retrospectives
- Conducting an efficient sprint retrospective
- What you should avoid in your retrospective

Module 11: Working from the Product Backlog

- Introducing the Kanban board
- Entering and editing details on the Kanban board
- Customizing columns, including using split columns and limiting WIP
- Recording our Definition of Done (DoD)
- Understanding the Cumulative Flow Diagram

Module 12: A Closer Look at Work Items

- Overview of work items
- Searching and creating custom queries
- Work item tagging
- Configuring project notifications

Module 13: Tracking Progress with Dashboards and Reports

- Searching and creating custom queries
- Work item charting and pinning charts
- Creating dashboards
- Overview of reporting architecture
- Reviewing the out-of-the box reports
- Creating ad hoc reports using Excel

Module 14: Getting Stakeholder Feedback

- Introducing the Microsoft Feedback Client
- Using the Microsoft Feedback Client to provide rich feedback to the team
- Adding continuous feedback into your workflow
