

Building Sites with SharePoint Designer 2010

This 2-day course provides a comprehensive drill-down of the new capabilities in SharePoint Designer 2010. It is designed for power users, administrators, developers, and anyone else who wants to learn how to customize SharePoint sites without having to use Visual Studio. This class includes over 50% hands-on labs that teach you how to customize sites, pages, lists, and content using SharePoint Designer 2010.

Flexible Learning Options

Attend in Person

- Industry expert trainers
- Relevant training skills
- High-tech teaching tools

Connect Remotely

- Classroom-in-the-cloud
- Connect from anywhere
- 24-hour access to labs

Bring Us Onsite

- Customized curriculum
- Connect staff from multiple locations
- Access virtual hardware and labs over the Internet

"I had concerns about remote training before I took this class. However I can see that Quicklearn makes it work well." - Kent M.

"The learning environment was top-notch. I especially liked the large monitors, 64bit OS and fast processors." - Matt E.

Course Highlights

At course completion, students will be able to:

- Describe new SharePoint Designer 2010 capabilities
- Customize SharePoint sites with the new Ribbon UI
- Browse and edit site content
- Create sites, pages, lists, and content
- Work with Master pages
- Create web part pages
- Customize pages with custom web parts
- Create and manage custom data views and data sources
- Use Business Connectivity Services to create external lists and content types
- Edit SharePoint's workflows as well as create custom site and global workflows
- Implement workflow logging

Audience

This course is intended for:

SharePoint power users, developers, and administrators with 3-6 months of hands-on experience with developing SharePoint Server 2007 applications.

Note: We also recommended that students attend the *Upgrading to SharePoint 2010 for Power Users* course which covers new SharePoint 2010 features that are not covered in this course.
